Standard errors are provided in parentheses and clustered by school. LEAP scores are standard deviations of scale scores within grade and year. The standardization uses non-evacuees in schools where there are < 70% evacuees and excludes schools in Orleans, Jefferson, St. Bernard, Plaquemines, Cameron, and Calcasieu parishes. When students have multiple scores for a single subject in a given year we use the lowest score. Quartiles are determined using the most recent pre-Katrina score available and are within grade and year. Placebo regressions are limited to pre-Katrina years and apply the 2006-07 and 2007-08 evacuee shares to 2003-04 and 2004-05 observations, respectively. Regressions also include controls for gender, race, free/reduced-price lunch eligibility, school fixed-effects, grade-by-year fixed-effects, and lagged achievement from the student's most recent pre-Katrina lagged score interacted with the number of years between exams. Middle/High includes grade 10 in 2001-2002 & 2002-2003, grades 8 and 10 in 2003-2004 & 2004-2005, and grades 6 - 10 in 2005-2006 & 2006-2007. *, **, and *** reflect significance at the 10%, 5%, and 1% levels, respectively.
