

Appendix Table 25 - School Level Placebo Test Regressions of School Performance Score on Evacuee Shares in Louisiana - 1999-00 Through 2004-05, No Controls		
	School Performance Scores in Year t Regressed on Evacuee Shares in Year t + 2	School Performance Scores in Year t Regressed on Evacuee Shares in Year t + 3
	(1)	(2)
Katrina/Rita Share	-5.7 (4.1)	-3.36 (2.9)
<i>Observations</i>	5,738	4,795
Katrina/Rita Share in Quartile 1	-56.0** (21.7)	-29.3 (23.8)
Katrina/Rita Share in Quartile 2	-23.2 (35.1)	-7.0 (27.9)
Katrina/Rita Share in Quartile 3	32.5 (30.6)	-15.1 (30.7)
Katrina/Rita Share in Quartile 4	9.8 (22.9)	0.7 (20.0)
<i>Observations</i>	5,738	4,795
Mean School Performance Score		83.1
Standard Deviation of SPS		20.9

Robust standard errors clustered by school are provided in parentheses and clustered by school. All regressions also include school fixed-effects and year dummies. School performance score (SPS) is a metric used to determine accountability ratings that includes test scores, attendance rates, dropouts, and graduation rates. See text for more details. In column (1), evacuee shares in 2005-06 and 2006-07 are matched to the same schools in 2003-04 and 2004-05, respectively so that all SPS scores in the regression are pre-Katrina. For 1999-00 through 2002-03 evacuee shares are set to zero. For column (2) the analysis is conducted one year earlier. Quartiles for evacuees in LA are within grade across the state data and determined from their most recent pre-Katrina score. Since SPS is an aggregate measure that includes both math and reading scores, evacuee shares are averaged across math and reading quartiles. *, **, and *** reflect significance at the 10%, 5%, and 1% levels, respectively.
